Professional Summary

QA leader and engineer with 10+ years of experience driving quality strategies across different industries (fintech, eCommerce, gamedev, browsers, backups). Skilled in building and leading high-performing QA teams, optimizing processes in complex Agile environments, and ensuring product quality, security, and efficiency. Hands-on with modern QA practices and basic security testing - combining technical depth with proven leadership and management in scaling teams and delivering results. For more details and achievements, check my LI profile.

Skills

- Testing Methodologies
- QA Strategies & Test Plans
- SDLC, Scrum/Agile
- Functional, Integration, Migration, API & Regression Testing
- UI/UX, Accessibility & Localization
- Cursor, ChatGPT, Co-pilot
- Python Scripting, WSL, bash
- SQL, HTML, CSS, HTTP
- Git, Jenkins, TeamCity, Docker
- Security Testing: Burp Suite, Metasploit, Nessus, ZAP, BeEF, Nmap, sqlmap
- Backups, Cassandra, ZFS
- Prioritization & Risk Management
- Confluence, Jira, TestRail, Zeplin, Figma, Zephyr, BrowserStack
- Linux, macOS, iOS, Android, Windows
- Azure, VMware vSphere,

Work History

Team Lead/Sr. QA Engineer — September 2024 - Current
Kaseya / Datto — Backup Solutions for MSPs
Responsibilities:

- Drive QA strategies, optimize processes, and remove delivery bottlenecks to improve product quality and team efficiency.
- Mentor and lead QA engineers, building hybrid manual/automation skillsets.
- Configure and troubleshoot environments (Linux, Windows, Azure, VMware, Docker, Terraform, SQL, Cassandra, OpenSearch, Python/PowerShell/CLI).
- Cut Azure test infrastructure costs by 30% via policies and automated cleanup.
- Established QA knowledge base and documentation to standardize practices.

Lead QA Engineer — August 2022 - August 2024
Octo Browser — Antidetect browser for multi-accounting.
Responsibilities:

- Led day-to-day QA activities of a 7-engineer QA team: strategy, test plans, checklists, and test cases.
- Performed functional, integration, regression, cross-platform, and security testing.
- Built Python scripts for API testing and test data generation.
- Collaborated on product specs/designs, advised on features, and improved workflows.
- Investigated and debugged issues to root cause using logs and diagnostic tools.

Results: Expanded test coverage, reduced cycle time by 15%, uncovered critical bugs (including performance and security) and influenced product improvements..

Head of Web QA — October 2020 - August 2022
Team Lead/Senior QA Engineer — July 2020 - August 2022
Humans Group — Banking, eCommerce.
Responsibilities:

- Estimated, prioritized, and coordinated QA activities across multiple projects.
- Planned QA strategy, automation scope, and executed test plans with cross-functional teams.
- Designed workflows and processes, ensuring compliance for new and existing products.
- Reviewed requirements/designs and performed regression, integration, and cross-browser testing
- Conducted interviews, evaluations, and mentored a QA team (3 mid-senior, 3 junior).

Results: Unit test coverage (80% of the code) and integration tests were implemented, which reduced the number of bugs by up to 20% in later stages and prevented integration bugs from reaching production. Unit tests also covered 50% of UI components. I helped the QA team of 3 middle-senior and 3 junior-level engineers grow professionally and become independent QA Engineers responsible for QA without supervision from the lead.

Senior QA Engineer — November 2019 - June 2020
Yandex — a search engine and web portal that offers taxis, maps, navigators, public transport, weather, news, and other services.
Responsibilities:

- Owned QA KPIs and ensured compliance with standards.
- Developed and executed test strategy; implemented QA/QC measures.
- Analyzed requirements, created and maintained test case suites, and supported crowd-testing.
- Participated in sprint planning, grooming, estimations, and risk evaluation.
- Reported test results and progress; built dashboards to track QA KPIs in real time.

Results: Established coherent and transparent QA practices for stakeholders and the team, leading to more valuable, stable, and frequent releases (1-2 times a week instead of 1 in two weeks). Ensured the company's QA KPIs were met without reducing the number of product KPIs by prioritizing bug backlog and planning bug fixes in each sprint:

- About 70% fewer medium and high priority issues on the prod env
- About 80% fewer bugs were found by end users after the features shipped
- The speed of fixing known bugs was improved by up to 300%
- Crowd testers perform 30% of regression testing. Components autotest coverage was increased by 30%

Senior QA Engineer — January 2013 - November 2019
Wargaming — online video game developer and publisher.
Responsibilities:

- Led QA on 10+ large projects, covering functional, non-functional, regression, and security testing.
- Drove feature testing from early development through release, refining QA processes and automation scope.
- Coordinated integration testing and communication across multiple teams and departments.
- Performed penetration testing outside planned audits, identifying critical security issues early.
- Acted as primary QA contact for managers, stakeholders, and cross-project teams.

Results: Prevented security issues by catching up to 100% of bugs during active development, streamlined workloads to reduce crunch, improved audit speed, and ensured on-time delivery of high-quality projects.

Education

Master's Degree: Mathematics (Information Technology) **—** June 2014
Belarusian State University — Minsk

English: Advanced (C1, IELTS CLB 9)
